

SkyGen User Guide

Step One: *Installation*

- ❖ Close MO2 if it's open
- ❖ Manually download the file from Nexus Mods
- ❖ Locate the file in your downloads folder
- ❖ Right click and use 7zip or WinRAR to extract the folder - I like to extract folders to themselves
- ❖ Open the newly extracted folder
- ❖ Drag and drop the SkyGen folder into This PC/your drive here (x:)/modding/MO2/plugins
- ❖ Open MO2 and navigate to the plugins toolbox (the puzzle pieces in the top right corner)
- ❖ Click the SkyGen tool to open

Congratulations, you have downloaded SkyGen!

Step Two: *Usage*

Once you have opened SkyGen, the welcome page will display. Please read through this info and scroll to the bottom and hit the check box to certify you have read it. While you do this, the modlist scanner will be working in the background. If you have a smaller modlist, this will most likely be done before you are done reading. For larger modlists, this will take a bit. Feel free to grab a drink or scroll through the available themes and pick your favorite!

- ❖ Select your game type if not already selected
- ❖ Select your patch type (SkyPatcher or BOS)

SkyPatcher Section:

<https://www.nexusmods.com/skyrimspcialedition/mods/106659?tab=files>

ML Gen - This scans your whole modlist and applies patches for the specific category you selected in the Category (Record Type): box. You will have to pick the category you want to generate for and then hit the Generate Patch button.

Cat Gen - This scans your whole modlist and applies all the categories at once - most newbie-friendly setting

Single Plugin Mode - This is an advanced mode for modders who know exactly what record needs to be SkyPatched. SkyGen just makes it easier

Dev Tools

Audit - Mods that will not be able to be patched, if a mod is here it is most likely a framework or similar. You can add or remove mods from this list at any time. Do at your own risk

Loom - Auto keywords - assists with generating the SkyPatcher Files - Not required to be checked

Generating

- ❖ Choose your settings
- ❖ Select output folder
- ❖ Hit the Generate Patch button

BOS Section:

<https://www.nexusmods.com/skyrimspcialedition/mods/60805?tab=files>

BOS INI Settings: M2M (Mod to Mod)

Target Mod - This mods items will be swapped out

Source Mod - This mods items will be swapped in

Category - the items you want swapped, can select all items in the mod or just ones from a specific category eg. furniture

Chance - The chance an item will be swapped

FormID Overrides: To BOS your ENTIRE modlist

This is an advanced part of SkyGen BOS. Intended for final modlists

Form ID Box - Where your form IDs will show after you hit the Scan Em' button

X, Y, Z, Boxes - These are to change the position of a form ID record

Chance - The chance an item will be swapped - this chance is independent of the M2M chance

Clear Lst - This will clear the Form ID table

+*Line* - add an empty line

Scan Em' - Scan your whole modlist for Form IDs

Scan all mods button - This will scan your mods - also needs to be selected to use the Form ID box

Filter - filter by record type

- ❖ Select your settings
- ❖ Choose your output folder
- ❖ Hit the Generate Patch button
